

# UNTANGLING THE WEB OF LIFE

## A STEP INTO THE SCIENCE OF HUMANS, WILDLIFE, AND THE NATURAL WORLD

**MONDAY  
12 MAY  
2025**

Human food security and health, infectious disease pandemics, the extinction crisis, understanding animal sentience and welfare: the need to understand the complex interactions between all living things has never been more important or urgent.

Join us for an unforgettable day designed for all students who want to understand the complex links between human biology, animals, and the natural world.

This event is for **year 12 students** to introduce them to the different aspects of the Biological Sciences, the career paths that can come from studying at LJMU and how what happens in our environment is for everyone.

Join us on **Monday 12th May between 10am and 2.30pm** and we'll provide your students with workshops in Animal Behaviour, Biology, Wildlife Conservation, and Zoology, and a tour of the campus and nearby student halls.

This is more than an open day — it's a call to action. Society needs to engage and understand the living world within and around us more than ever before. Get involved and be part of the solution!

**Class groups should be no more than 15-20 students.**
