---	---------------	---	---	---	---

		<ul style="list-style-type: none"> <li>Recognise and use expressions in decimal form.</li> <li>Use ratios, fractions and percentages.</li> <li>Change the subject of an equation.</li> <li>Substitute numerical values into algebraic equations using appropriate units for physical quantities.</li> </ul>	<p>explain ways of reducing unwanted energy transfers, for example, through lubrication.</p> <ul style="list-style-type: none"> <li>Energy and power: Students should be able to give examples that illustrate the definition of power.</li> </ul> <p><b>AQA 4.1.1.3 Specific Heat capacity</b></p> <p><b>4.3.2 Internal energy and energy transfers</b></p> <p>And RP 1</p> <p><b>REQUIRED PRACTICAL 1:</b> investigation to determine the specific heat capacity of one or more materials. AT 1 and 5.</p>		
3. Thermal energy transfers	Autumn	<ul style="list-style-type: none"> <li>Change the subject of an equation.</li> <li>Substitute numerical values into algebraic equations using appropriate units for physical quantities.</li> <li>MS 1a, b, c, 3b, c Students should be able to recall and apply this equation to changes where mass is conserved.</li> </ul>	<p><b>AQA 4.3.1 Changes of state and the particle model</b></p> <p><b>4.3.1.1 Density of materials</b></p> <p>The density of a material is defined by the equation:</p> <p>Density = mass/volume</p> <p><b>REQUIRED PRACTICAL 5:</b> use appropriate apparatus to make and record the measurements needed to determine the densities of regular and irregular solid objects and liquids. Volume should be</p>	<p><b>Links from KS3:</b></p> <p>Energy in Year 7 Energy transfers. Conservation of energy.</p> <p>Waves in year 7 including sound and light</p> <p>Heating and Cooling unit in Year 8 including conduction, convection and radiation, cooling curves and internal energy</p>	<p><b>Year 10:</b></p> <p><b>4.6.3 Black body radiation and RP 10</b></p> <p>Links to AS/A2 Thermal Physics</p>

		<ul style="list-style-type: none"> <li>• Use a variety of models to solve problems, make predictions and to develop scientific explanations and understanding of familiar and unfamiliar facts.</li> <li>• Explain everyday and technological applications of science; evaluate associated personal, social, economic and environmental implications; and make decisions based on the evaluation of evidence and arguments.</li> <li>• MS 1a, b, c, 3b, c Students should be able to recall and apply this equation to changes where mass is conserved.</li> </ul>	<p>determined from the dimensions of regularly shaped objects, and by a displacement technique for irregularly shaped objects. Dimensions to be measured using appropriate apparatus such as a ruler, <b>micrometer</b> or <b>Vernier callipers</b>.</p> <p>AT1</p> <p>Students should be able to explain the differences in density between the different states of matter in terms of the arrangement of atoms or molecules.</p> <p>The particle model can be used to explain the different states of matter • differences in density</p> <p><b>4.3.2.3 Changes of state and specific latent heat</b></p> <p>If a change of state happens: The energy needed for a substance to change state is called latent heat. When a change of state occurs, the energy supplied changes the energy stored (internal energy) but not the temperature. The specific latent heat of a substance is the amount of energy required to change the state of one kilogram of the substance with no change in temperature.</p> <p>energy for a change of state = mass × specific latent heat</p> <p><math>E = mL</math></p>	<p>Year 9 matter</p>	<p>Spring Year 13</p>
--	--	--	---	----------------------	-----------------------

			<p>AQA 4.1.2 Conservation and dissipation of energy</p> <p>4.1.2.1 Energy transfers in a system</p> <p>And RP 2</p> <ul style="list-style-type: none"> <li>Thermal energy: Students should be able to explain ways of reducing unwanted energy transfers, for example, through the use of thermal insulation and be able to describe how the rate of cooling of a building is affected by the thickness and thermal conductivity of its walls.</li> </ul> <p><b>REQUIRED PRACTICAL 2:</b> investigate the effectiveness of different materials as thermal insulators and the factors that may affect the thermal insulation properties of a material. AT 1 and 5.</p>		
4. Black body and infrared	Autumn	<ul style="list-style-type: none"> <li>Use a variety of models to solve problems, make predictions and to develop scientific explanations and understanding of familiar and unfamiliar facts.</li> <li>Explain everyday and technological applications of science; evaluate</li> </ul>	<p><b>AQA 4.6.3 Black body radiation and RP 10</b></p> <ul style="list-style-type: none"> <li>Infra-red: Students should be able to explain: that all bodies (objects) emit radiation, and that the intensity of any</li> </ul>	<p><b>Links from KS3:</b></p> <p>Heating and Cooling unit in Year 8 including conduction, convection and radiation, cooling curves and internal energy</p>	<p>Links to GCSE</p> <p>Spring Y11 <b>Space</b></p>

		<p>associated personal, social, economic and environmental implications; and make decisions based on the evaluation of evidence and arguments.</p>	<p>emission depends on the temperature of the body.</p> <ul style="list-style-type: none"> <li>Perfect black bodies and radiation: Students should be able to explain how the temperature of a body is related to the balance between incoming radiation absorbed and radiation emitted, using everyday examples to illustrate this balance, and the example of the factors which determine the temperature of the Earth.</li> </ul> <p><b>REQUIRED PRACTICAL 10:</b> investigate how the amount of infrared radiation absorbed or radiated by a surface depends on the nature of that surface. AT 1 and 4.</p>	<p><b>Links from KS4:</b></p> <p>4.6.2 Electromagnetic waves</p>	<p>Links to AS/A2 Waves</p> <p>Spring Year 12</p> <p>Links to A-level AT a, b, i and j.</p>
<p>5. Forces</p>	<p>Spring</p>	<ul style="list-style-type: none"> <li>Recognise and use expressions in decimal form</li> <li>Use ratios, fractions and percentages</li> <li>Change the subject of an equation</li> <li>Substitute numerical values into algebraic equations using appropriate units for physical quantities</li> <li>use a variety of models to solve problems, make predictions and to develop scientific explanations and</li> </ul>	<p><b>AQA 4.5.1, 4.5.2 Forces</b></p> <p><b>4.5.6 Forces and motion and RP7</b></p> <ul style="list-style-type: none"> <li>(speed and the quantitative relationship between average speed, distance and time (speed = distance ÷ time)</li> <li>The representation of a journey on a distance-time graph)</li> <li>Forces measured in newtons</li> </ul> <p><b>REQUIRED PRACTICAL 7:</b> investigate the effect of varying the force on the</p>	<p><b>Links from KS3:</b></p> <p>Forces and motion in Year 7 and 9</p>	<p><b>Links to GCSE</b></p> <p>Spring Year 10 Topic 7 Forces and elasticity (including stopping distances and terminal velocity)</p> <p>Autumn Year 11:</p> <p>4.5.4 Moments and levers and gears</p> <p>4.5.5 Pressure and pressure differences in fluids</p>

		understanding of familiar and unfamiliar facts.	acceleration of an object of constant mass, and the effect of varying the mass of an object on the acceleration produced by a constant force. AT 1, 2 and 3.		4.5.7 Momentum  Links to AS/A2 Mechanics  Autumn/Spring Year 12
6. Electricity	Summer	<ul style="list-style-type: none"> <li>Recognise and use expressions in decimal form</li> <li>Recognise and use expressions in standard form</li> <li>Use ratios, fractions and percentages</li> <li>Change the subject of an equation</li> <li>Substitute numerical values into algebraic equations using appropriate units for physical quantities</li> <li>use a variety of models to solve problems, make predictions and to develop scientific explanations and understanding.</li> <li>Explain everyday and technological applications of science; evaluate associated personal, social, economic and environmental implications; and make decisions based on the evaluation of evidence and arguments.</li> </ul>	<b>AQA 4.2 Electricity and RP 3 and 4</b> <ul style="list-style-type: none"> <li>Charge, electric fields</li> <li>Current, potential difference and resistance</li> <li>Investigating factors affecting resistance</li> <li>IV characteristics</li> <li>Series and parallel circuits</li> <li>Charge, current, time, <math>Q=It</math></li> <li>Potential difference and energy, <math>E=QV</math></li> <li>Resistance, <math>R=V/I</math></li> <li>Direct and alternating potential difference: Students should be able to explain the difference between direct and alternating potential difference.</li> <li>Mains electricity: Students should be able to explain that a live wire may be dangerous even when a switch in the mains circuit is open, the dangers of providing any connection between the live wire and earth.</li> </ul>	<b>Links from KS3:</b>  Electricity unit in Year 7 including paying for electricity; Electricity in year 9 including static electricity, electric fields and circuits	Links to GCSE <b>Magnetism and electromagnetism</b>  Spring Year 11  Links to AS/A2 <b>Electricity</b>  Autumn Year 12

		<ul style="list-style-type: none"><li>Evaluate risks both in practical science and the wider societal context, including perception of risk in relation to data and consequences.</li></ul>	<ul style="list-style-type: none"><li>Power and energy: Students should be able to explain how the power transfer in any circuit device is related to the potential difference across it and the current through it, and to the energy changes over time.</li><li>Energy transfers in everyday appliances: Students should be able to describe how different domestic appliances transfer energy from batteries or ac mains to the kinetic energy of electric motors or the energy of heating devices. Students should be able to explain how the power of a circuit device is related to the potential difference across it and the current through it, the energy transferred over a given time. Students should be able to describe, with examples, the relationship between the power ratings for domestic electrical appliances and the changes in stored energy when they are in use.</li><li>National grid: Students should be able to explain why the National Grid system is an efficient way to transfer energy.</li></ul> <p><b>REQUIRED PRACTICAL 3:</b> Use circuit diagrams to set up and check appropriate circuits to investigate the factors affecting the resistance of electrical circuits. This should include:</p> <ul style="list-style-type: none"><li>the length of a wire at</li></ul>		
--	--	---	---	--	--

			constant temperature • combinations of resistors in series and parallel. AT 1, 6, 7.  <b>REQUIRED PRACTICAL 4:</b> use circuit diagrams to construct appropriate circuits to investigate the I–V characteristics of a variety of circuit elements, including a filament lamp, a diode and a resistor at constant temperature. AT 6 and 7.		
7. Elasticity	Summer	<ul style="list-style-type: none"> <li>• give examples of the forces involved in stretching, bending or compressing an object</li> <li>• explain why, to change the shape of an object (by stretching, bending or compressing), more than one force has to be applied – this is limited to stationary objects only</li> <li>• describe the difference between elastic deformation and inelastic deformation caused by stretching forces.</li> <li>• describe the difference between a linear and non-linear relationship between force and extension</li> <li>• calculate a spring constant in linear cases</li> <li>• interpret data from an investigation of the relationship between force and extension</li> <li>• calculate work done in stretching (or compressing) a spring (up to</li> </ul>	<p><b>AQA 4.1.1.2 changes in energy – elastic potential energy</b></p> <p><b>4.5.3 Forces and elasticity</b></p> <ul style="list-style-type: none"> <li>• Forces: associated with deforming objects; stretching and squashing – springs; Hooke’s Law as a special case</li> <li>• Work done and energy changes on deformation</li> <li>• Measurements of stretch or compression as force is changed</li> <li>• Force-extension linear relation; Hooke’s Law as a special case</li> <li>• Moment as the turning effect of a force</li> <li>• Simple machines give bigger force but at the expense of smaller movement (and vice versa): product of force and displacement unchanged</li> </ul> <p><b>REQUIRED PRACTICAL 6:</b> investigate the relationship between force and extension for a spring. AT 1 and 2.</p>	<p><b>Links from KS3:</b></p> <p>Forces and motion in Year 7 and 9</p> <p>Year 10 Topic 5 forces</p>	<p>Links to AS/A2 Materials</p> <p>Spring Year 12</p>

		<p>the limit of proportionality) using the equation:</p> <p>elastic potential energy =</p> <p><math>0.5 \times s \text{ pring constant} \times \text{extension}^2</math></p> <p><math>E_e = 1/2 k e^2</math></p>
