

Geography A' level – transition work

PHYSICAL GEOGRAPHY

Volcanoes around the world are not always the same and can differ in their shape, size, geology and most importantly in their type of eruption. Research why this is the case and write an A4 answer to explain why they can differ and explain how plate tectonics drives these differences.

Aim to have at least one side (A4, Font size 11- 40 lines) of writing. You can illustrate your answer with relevant maps, diagrams and/or photos. Please include on a separate page a list of the sources you look at and highlight those you use.

HUMAN GEOGRAPHY

Read the included Geofile article from 2021 called ***China: a global power.***

Complete as notes the 5 'learning check point' questions. There are weblinks at the end to help you develop your research.

Answer the 5 Focus questions as formal answers. The 'essay' Q5 should be about one side of A4.
